Anyone else having issues with nerdfonts?

Due to some reason certain icons aren't being rendered properly.I installed a new patched font but the problem still persists,Please help.

Kind icons aren't being rendered properly in cmp.

Also lua line is having some visual issues after migrating to 0.9 inside tmux. I'm not entirely sure if these two problem are related in any way.

Lualine bleeding outwards

The reason is because you installed a new patched font. Nerdfont 3.0 introduced some

and everything works well, I would recommend doing this until things break from
plugins updating then you can redownload an up-to-date nerdfont.

I started having this issue before installing a newly patched font.
I assumed that installing a new font would solve the issue. I see that it's not the
case.

Isn't this because you nerdfont had a 3.0 release? You should look at nerdfix. Can't send
link because om mobile.

I had the exact same issue! I was using nvim 0.9 for a long time. For me the issue
occurred after I ran PackerSync. So I guess the issue lies with one of my plugins. Or
maybe my terminal. I did not really have had time yet to find out what the issue was
though. I ended up disabling the icons for lualine and cmp. The issue with lualine was
very annoying. I use WSL + Alacrity (running on windows) + tmux + neovim.

Ah, it's good to be able to relate to someone.
I use Alacrity as well, but I have tried out used other terminals as well and lualine
still bleeds into the cmdwin.

Were you able to come up with a solution?

I had the issue with alacrity. I tried out kitty and it worked great. So I ended up
switching fonts, I was using fira code, and then I swapped to UbuntuMono and it all
works now.
